Patient ID : 030226018
Patient Name : **MS. TANUSHREE WANKHEDE**
Age / Gender : 17 YEARS / FEMALE
Ref. By : NA.
Affiliation : Vikalp Path Lab - Bharatwada
Sample Type : EDTA WHOLE BLOOD

Sample Collecton On : 03-Feb-2026 8:51 AM
Sample Received on : 03-Feb-2026 8:51 AM
Report Released on : 03-Feb-2026 11:53 AM
Aadhaar/Passport No. :

COMPLETE BLOOD COUNT

Investigation	Result	Unit	Bio. Ref. Range	Method
RBC PARAMETERS				
Haemoglobin (HB)	12.7	gm/dl	12-15	Sodium Lauryl Sulfate - SLS Method
Red Blood Cells (RBC)	4.45	mill/cumm	4.10-5.30	Electrical impedance
Packed Cell Volume (PCV/HCT)	36.5	%	35-45	Sodium Lauryl Sulfate (SLS) hemoglobin method
Mean Corpuscular Volume (MCV)	82.2	fl	78-95	Calculated
Mean Corpuscular Hemoglobin(MCH)	28.6	pg	26-32	Calculated
Mean Corp. Hemo. Conc.(MCHC)	34.8	g/dl	32-36	Calculated
Red Cell Distribution Width (RDW-SD)	33.9	%	39-46	Calculated
Red Cell Distribution Width (RDW-CV)	13.5	%	11.6-14	Calculated
WBC PARAMETERS				
Total Leucocytes Count(TLC)	4510	cells/cumm	4000-10500	Electrical impedance
Neutrophils	40	%	44-76	Flow cytometry
Lymphocytes	53	%	15-43	Flow cytometry
Eosinophils	02	%	0-06	Flow cytometry
Monocytes	05	%	4.0-8.9	Flow cytometry
PLATELET PARAMETERS				
Platelet count	267000	/ cumm	150000-450000	Electrical impedance
Mean Platelet Volume (MPV)	9.3	Text	6-9.5	Calculated
Platelet Cell Distribution Width (PDW)	11.9	%	9-17	Calculated

B -Vitamin B12

Investigation	Result	Unit	Bio. Ref. Range
---------------	--------	------	-----------------

Vitamin B12 level 287.16 pg/ml 211 - 911

Method : Fully Automated Chemi Luminescent Immunoassay

Level of vit B12 in blood	Severity
211 to 1000	Normal
100 to 200	Borderline/Mild deficiency
<100	Severe deficiency

Clinical significance :

Vitamin B12 or cyanocobalamin is a complex corrinoid compound found exclusively in animal dietary sources, such as meat, eggs, and milk. It is critical in normal DNA synthesis, which in turn affects erythrocyte maturation and in the formation of the myelin sheath. Vitamin-B12 is used to find out neurological abnormalities and impaired DNA synthesis associated with macrocytic anemias. For diagnostic purposes, results should always be assessed in conjunction with the patient's medical history, clinical examination, and other findings.

D -Vitamin D3

Investigation	Result	Unit	Bio. Ref. Range
Vitamin D Total	5.52	ng/ml	Deficiency : <20 Insfficiency : 20-<30 Sufficiency : 30-100 Toxicity : >100

Method : Fully Automated Chemi Luminescent Immunoassay

INTERPRETATION

1. The 25-hydroxyvitamin D is the major form found in the blood and is the relatively inactive precursor to the active hormone, 1,25-dihydroxyvitamin D. Because of its long half-life and higher concentration, 25-hydroxyvitamin D is commonly measured to assess and monitor vitamin D status in individuals. A low blood level of 25-hydroxyvitamin D may mean that a person is not getting enough exposure to sunlight or enough dietary vitamin D to meet his or her body's demand or that there is a problem with its absorption from the intestines.

2. Vitamin D is a fat soluble vitamin and exists in two main forms as cholecalciferol (vitamin D3) which is synthesized in skin from 7-dehydrocholesterol in response to sunlight exposure & Ergocalciferol(vitamin D2) present mainly in dietary sources.Both cholecalciferol & Ergocalciferol are converted to 25(OH)vitamin D in liver. 3. Testing for 25(OH) vitamin D is recommended as it is the best indicator of vitamin D nutritional status.
